

CLAIMS

What is claimed is:

- 1 1. A method of optimizing production in a well,
2 comprising:
3
4 operating an artificial lift system in a
5 wellbore;
6
7 monitoring a plurality of production parameters
8 at the surface;
9
10 monitoring a plurality of downhole parameters in
11 the wellbore;
12
13 evaluating measured data derived from the
14 plurality of production parameters and the plurality
15 of downhole parameters according to an optimization
16 model; and
17
18 adjusting operation of the artificial lift
19 mechanism based on the automatic evaluation.
- 1 2. The method as recited in claim 1, wherein operating
2 comprises operating an electric submersible pumping
3 system.
- 1 3. The method as recited in claim 1, wherein monitoring
2 the plurality of production parameters comprises
3 measuring a tubing pressure and a tubing temperature.

1 4. The method recited in claim 1, wherein monitoring the
2 plurality of production parameters comprises measuring
3 a casing pressure.

1 5. The method as recited in claim 1, wherein monitoring
2 the plurality of production parameters comprises
3 measuring multiphase flow data.

1 6. The method as recited in claim 1, wherein monitoring
2 the plurality of production parameters comprises
3 measuring a tubing pressure, a tubing temperature, a
4 casing pressure, and multiphase flow data.

1 7. The method as recited in claim 1, wherein monitoring
2 the plurality of downhole parameters comprises
3 measuring a pump intake pressure.

1 8. The method as recited in claim 1, wherein monitoring
2 the plurality of downhole parameters comprises
3 measuring a pump discharge pressure.

1 9. The method as recited in claim 1, wherein monitoring
2 the plurality of downhole parameters comprises
3 measuring an intake temperature.

1 10. The method as recited in claim 1, wherein monitoring
2 the plurality of downhole parameters comprises
3 measuring a pump intake pressure, a pump discharge
4 pressure and an intake temperature.

- 5 11. The method as recited in claim 1, wherein monitoring
6 the plurality of downhole parameters comprises
7 measuring distributed temperature.
8
- 1 12. The method as recited in claim 1, wherein monitoring
2 the plurality of downhole parameters comprises
3 measuring a fluid viscosity.
4
- 1 13. The method as recited in claim 1, wherein monitoring
2 the plurality of downhole parameters comprises
3 measuring a fluid density.
4
- 1 14. The method as recited in claim 1, wherein monitoring
2 the plurality of downhole parameters comprises
3 measuring a bubble point.
4
- 1 15. The method as recited in claim 1, wherein at least one
2 of monitoring a plurality of production parameters and
3 monitoring a plurality of downhole parameters
4 comprises using a multiphase flowmeter.
5
- 1 16. The method as recited in claim 1, wherein evaluating
2 comprises processing the data on a computer.
3
- 1 17. The method as recited in claim 1, wherein adjusting
2 comprises changing a frequency output of a variable
3 speed drive.
1
- 1 18. The method as recited in claim 1, wherein adjusting
2 comprises adjusting a choke to change flow rate.
3

1 19. The method as recited in claim 1, wherein adjusting
2 comprises removing a blockage.
3

1 20. The method as recited in claim 1, wherein adjusting
2 comprises repairing a leak.
1

1 21. A system for optimizing production in a well,
2 comprising:
3

4 an electric submersible pumping system positioned
5 in a well;
6

7 a sensor system having sensors positioned to
8 sense a plurality of production related parameters;
9 and
10

11 a well modeling module able to receive input from
12 the sensors, wherein the well modeling module is able
13 to contrast model values with measured data based on
14 input from the sensors in a manner indicative of
15 specific problem areas detrimental to optimizing
16 production from the well.
17

18 22. The system as recited in claim 21, wherein the
19 production related parameters are sensed in real time.
20

1 23. The system as recited in claim 21, further comprising
2 a validation module for validating data used in
3 modeling the well.
4

1

1 24. The system has recited in claim 21, wherein the sensor
2 system comprises sensors positioned to take both
3 downhole measurements and surface measurements.

1

1 25. The system as recited in claim 23, wherein the
2 validation module is able to validate pressure,
3 volume, and temperature data.

1

1 26. The system as recited in claim 23, wherein the
2 validation module is able to validate an above the
3 pump fluid gradient.

1

1 27. The system as recited in claim 23, wherein the
2 validation module is able to validate a differential
3 pressure across the pump.

1

1 28. The system as recited in claim 23, wherein the
2 validation module is able to validate an outflow
3 versus an inflow of fluid to the pump.

4

1 29. The system as recited in claim 21, further comprising
2 correcting a specific problem area determined from
3 contrasting the model values with measured data.

4

1 30. The system as recited in claim 29, wherein correcting
2 a specific problem area comprises changing a frequency
3 output of a variable speed drive.

4

1 31. The system as recited in claim 29, wherein correcting
2 a specific problem area comprises adjusting a choke to
3 change flow rate.
4

1 32. The system as recited in claim 29, wherein correcting
2 a specific problem area comprises removing a blockage.
3

1 33. The system as recited in claim 29, wherein correcting
2 a specific problem area comprises repairing a leak.
3

1 34. The system as recited in claim 29, wherein correcting
2 a specific problem area comprises removing a blockage
3 from a pump intake.
4

1 35. A method of diagnosing the operation of an electric
2 submersible pumping system having a pump powered by a
3 submersible motor, comprising:
4

5 gathering production related data;
6

7 comparing calculated pressure, volume, and
8 temperature values against measured data;
9

10 checking calculated above the pump gradient
11 values against measured data;
12

13 matching calculated across the pump values with
14 measured data; and
15

16 determining any unwanted discrepancies between
17 calculated values and measured data.

1 36. The method as recited in claim 35, wherein matching
2 comprises matching a differential pressure across the
3 pump and a measured intake pressure.

1 37. The method as recited in claim 35, further comprising
2 graphically displaying calculated values versus
3 measured data on an output device.

1 38. The method as recited in claim 35, further comprising
2 making operational adjustments to the electric
3 submersible pumping system to optimize production from
4 the well.

1 39. A method of optimizing production when an electric
2 submersible pumping system, having a pump powered by a
3 submersible motor, is used as an artificial lift system to
4 produce a fluid, comprising:

5
6 gathering production related data;

7
8 checking measured pressure, volume, and
9 temperature (PVT) data against calculated PVT data
10 calculated according to a desired model; and

11
12 optimizing production based on discrepancies
13 determined between the measured PVT data and the
14 calculated PVT data.

- 1 40. The method as recited in claim 39, wherein optimizing
2 comprises changing flow rate by adjusting a valve.
- 1 41. The method as recited in claim 39, wherein optimizing
2 comprises changing flow rate by adjusting a choke.
- 1 42. The method as recited in claim 39, wherein optimizing
2 comprises changing flow rate by adjusting the
3 frequency of a variable speed drive.
- 1 43. The method as recited in claim 39, wherein optimizing
2 comprises changing flow rate by replacing a production
3 related component.
- 1 44. The method as recited in claim 39, wherein optimizing
2 comprises changing flow rate by removing a blockage
3 restricting fluid flow.
4
- 1 45. The method as recited in claim 39, wherein optimizing
2 comprises changing flow rate by repairing a fluid
3 leak.
- 1 46. The method as recited in claim 39, wherein checking
2 comprises comparing an above the pump gradient.
- 1 47. The method as recited in claim 39, wherein checking
2 comprises comparing an across the pump gradient.
- 1 48. The method as recited in claim 39, wherein checking
2 comprises comparing a below the pump gradient.

- 1 49. The method as recited in claim 39, wherein checking
2 comprises comparing inflow data to outflow data.
